Subject: Speed Sensor Becoming Fracture Critical

Based on the MSFC FCB review / recommendation we are working toward changing the speed sensor to fracture critical. I am still figuring out exactly what needs to be done but it looks like this will be a class I EC (since it requires a part number change).

To save \$'s, I would like to propose to my program managers that only the latest configuration (single piece, 3 strand) becomes fracture critical. I want to make sure you don't have problems with this.
